SUPPORTING CITIZEN AWARENESS & ACTION WITH KEY TAKEAWAYS OF WORK BY INSIGHTFUL SUBSTACK AUTHORS

Find us here...

Welcome to our fifth issue!
 Printable copies are found here: canadianshareablenews.substack.com/. This site quickly surpassed 1000 page views and with your help, we hope to continue reaching more readers, and keep building awareness of the phenomenon of captured news agencies censoring out "opposing viewpoints." Please keep circulating the print copies and sharing our website to help combat "Information Omission" – a form of Disinformation that many people don't know exists.

These are the definitions related to 'misinformation' posted by Health Canada at cyber.gc.ca. See page 3 to read how others define this term differently.

Misinformation refers to false information that is not intended to cause harm.

Disinformation refers to false information that is intended to manipulate, cause damage, or guide people, organizations, and countries in the wrong direction.

Malinformation refers to information that stems from the truth but is often exaggerated in a way that misleads and causes potential harm.

NEW!! Topic Index

An index of Actions, People, Topics, etc. has now been posted under the Reference Materials tab on our website.

I thought it was honestly ridiculous how people get bitten with the patriotism bug and are then carted halfway across the globe... to murder people they don't even know on behalf of shady oligarchs, unaccountable spy agencies and a defense industry cranking out bombs and missiles as fast as they can... As I speak, Russians and Ukrainians are being driven to kill each other gruesomely... and our leaders are supplying them with the arms to do so.

This critique of tactics used by the military industrial complex has been turned into a powerful 18 minute video and posted in November 2023: <https://visceraladventure.substack.com/p/war-and->

BREAKING NEWS

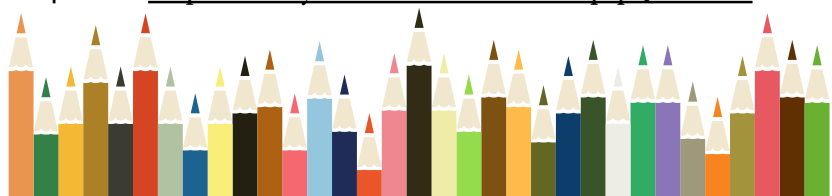

Have you been hearing this on any mainstream news outlets?

US Republican Senators held a press release to show why the proposed vote on the **WHO Pandemic Treaty** and the **International Health Regulations** should NOT go ahead at the end of May. See the summary here: <https://www.canadaexitwho.org/>

UK's Dr. Hilary Cass released the final report on **gender-affirming care** for children, which has the potential to impact the use of puberty blockers & surgery in other countries. <https://andrewdoyle.substack.com/p/the-cass-review-a-damning-indictment>

Veteran political analyst Garland Nixon explains how the **strike by Iran on Israel** "changes everything" for geopolitics, demonstrating that Israel does not have the military power many believed it had. www.youtube.com/watch?v=wUJsrQuYaH8. Nixon's financial analysis of the effect of war on fuel prices is also insightful.

US military analyst Scott Ritter explains how the **war in Ukraine** is drawing to a close, with 80,000 soldiers dead in the first 3 months of 2024 alone. https://www.youtube.com/watch?v=qrqiQtDs_Lo

HOMEGROWN HEROES - Going beyond the call of duty

Dr. Byram Bridle is an Associate Professor of Viral Immunology in the Department of Pathobiology at the University of Guelph (ON). On April 20, 2024 he marked "an unwelcome milestone": 1000 days since he was locked out of his university office and laboratory by university officials and since smear campaigns against him started.

Dr. Bridle became widely known for his remarks on the Alex Pierson show on Corus Radio on May 27, 2021. He explained the research findings sent to Japan from Pfizer showing how following injection into mice, the lipid-nanoparticles accumulated in organs such as the spleen, liver, ovaries, testes where they would release mRNA to train cells to create harmful spike protein. He urged fellow vaccinologists to rethink their approach, which resulted in actions against him. Just one year earlier, CBC news reported that Dr. Bridle was one of three U of Guelph researchers who had received funding for work on a vaccine platform to be used for cancer, and that could be adapted for use with infectious diseases, including COVID-19. viralimmunologist.substack.com/p/an-unwelcome-milestone

Pleas for the Health of Children

Alberta Health Services has added the COVID-19 injections to the childhood vaccination schedule. It also kept them approved for children as young as 6 months old, despite there being no evidence of them offering protection. And despite the risk of adverse events up to and including death. Investigator David Dickson has been tirelessly advocating for a stop to the harm to children for years. <https://twitter.com/dksdata/status/1781794009624576168>

Calgary data analyst Sheldon Yakiwchuk wrote a 2-part letter to parents showing how government data does NOT support a rationale for these injections. sheldonyakiwchuk.substack.com/p/dear-alberta-parents-and-expecting. Edmonton oncologist Dr. William Makis has shared his own letter to the Premier and the Health Minister, which was reposted along with an additional letter template for interested Albertans to copy or adapt in their own attempts to ban these toxic injections for use on children. <https://followingthecovidscience.substack.com/p/when-too-much-is-too-much-we-demand>. Informed parents choose NOT to get the shots.

CANARIES in a COVID WORLD

While misinformation experts worry about people's exposure to opposing viewpoints online, experts in law, medicine, journalism, as well as those injured by COVID-19 shots followed George Orwell's motto: "In a time of deceit, telling the truth is a revolutionary act." Their evidence-based contributions form the core of this new book: "Canary In a Covid World, How Censorship and Propaganda Changed Our (My) World" A collection of essays from 34 contemporary thought leaders. Available at [Amazon in print, ebook or audio](https://amazon.com), [Apple Books \(audio\)](https://apple.com) and [Audible](https://audible.com). Links to their videos and in many cases, their book chapters, can be found here: <https://canaryinacovidworld.substack.com/archive>

Questioning The Ethics of Nudging

"Nudging" is defined as the use of insights from the social and behavioural sciences to get the citizens to change their behaviour. A recently published review of such tactics shows that ethics and shared decision-making were dropped in recent years. <https://www.cureus.com/articles/236547-ethics-of-nudging-in-the-covid-19-crisis-and-the-necessary-return-to-the-principles-of-shared->

Misinfo Experts Target Opposing Viewpoints

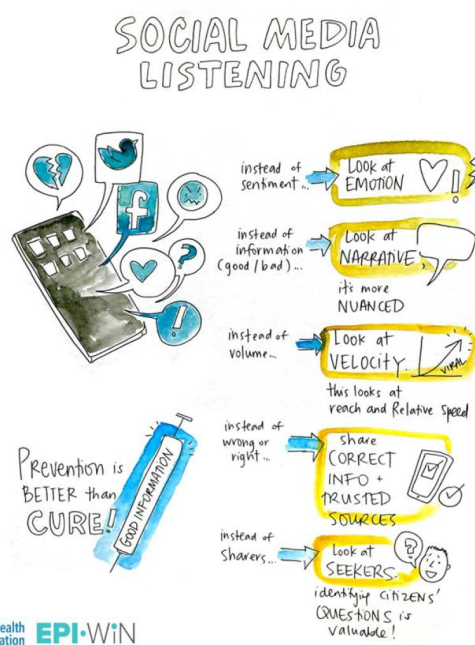

Misinformation Review is a journal launched in 2020 at Harvard-Kennedy School. In 2023 they published a survey of experts seeking solutions to the problem of misinformation. "The experts we surveyed defined misinformation as false and misleading information." Among the experts was a mix of political scientists and psychologists. Of note is that these experts "leaned strongly toward the left of the political spectrum" with 126 out of 148 identifying themselves as slightly, fairly or very left of centre. They appear very concerned that "people are more exposed to opposing viewpoints online than offline." They were in favour of actions such as "platform design changes, algorithmic changes, content moderation, de-platforming prominent actors that spread misinformation, and crowdsourcing misinformation detection or removing it." They believe that "These findings could help policymakers and social media platforms guide their efforts against misinformation." https://misinforeview.hks.harvard.edu/wp-content/uploads/2023/07/altay_survey_expert_views_misinfo_20230727.pdf

WHO Listening In

Already in August 2020, the World Health Organization revealed its use of speech recognition tools powered by artificial intelligence to apply "social listening" techniques. (See the image on the right.)

Misinformation Research

University of Cambridge philosophy lecturer and Associate Fellow at the Leverhulme Centre for the Future of Intelligence, Dan Williams recently wrote: "[M]odern misinformation research confronts a dilemma when it comes to defining 'misinformation': On the one hand, if researchers define the concept so that it only includes clear-cut falsehoods, misinformation appears to be relatively rare in the media ecosystem and largely symptomatic of other problems, at least in Western democracies. On the other hand, if researchers define the concept to include subtler ways in which communication can be misleading even when it's not demonstrably false, the concept becomes so expansive, amorphous, and value-laden that we shouldn't trust misinformation experts to decide what counts as misinformation." In other words - if the term "misinformation" is used only for "clear-cut falsehoods", it is rare. If it is used to refer to anything that could be "misleading", we can't trust anyone to determine what that could be. <https://www.conspicuouscognition.com/p/should-we-trust-misinformation-experts> William's main research focus is on functions of and causes of belief and he recently started looking at using recent advances in neuroscience and machine learning to address foundational philosophical questions about the mind. <https://danwilliamsphilosophy.com/>

IN OTHER NEWS - OUTSIDE OF THE SUBSTACK FAMILY OF WRITERS

Cannabis for Cancer and/or Pain Relief?

When an oncologist looks into cannabis research and finds encouraging results, some people take interest. Dr. William Makis posts recent findings here: <https://makismd.substack.com/p/cbd-cannabidiol-and-cancer-recent>

Meanwhile other people are finding healing properties and pain relief from juicing the fresh leaves of the marijuana plant. This is proving to be more effective and less psychoactive than processes involving heat (i.e. smoking or baking). Sign up to BRASSCHECK NEWS with Ken McCarthy for a daily news video service, full of all kinds of interesting knowledge. www.brasscheck.com/video/dont-heat-smoke-cannabis/.

Transformational Speaking
